Follow these steps to get PrEP medication to prevent HIV.

1. GET READY
   - PrEP is a safe and effective prevention option for people who are HIV-negative. PrEP medication works when taken as prescribed. Find local HIV testing sites at locator.hiv.gov.
   - Talk to our health care provider. Find a provider who makes you feel comfortable and supported.

2. GET SET
   - Get tested to make sure you are HIV negative.

3. GET PrEP
   - Get your prescription filled at your local pharmacy or find one near you.
   - Take the medication as prescribed and see your provider every 3 months to get tested for HIV, STIs, check your kidneys, and get a refill.

Is PrEP right for me?
